

**"LIGHTING EQUIPMENT"****\* \* \* \*****A B S T R A C T**

A lamp is disclosed which comprises a first element and second element placed in line and having, at one of their ends, a first flat base and  
5 respectively a second flat base on an inclined plane with respect to the corresponding longitudinal axis, and a first and respectively a second straight sections having the same external perimeter. The first and second flat bases rest on a common contact plane, have the same external perimeter and turn on a common axis of rotation passing through their centre at right angles to  
10 the contact plane. Fig. 2
